IMPORTANT INFORMATION ABOUT PCGS RESTORATION

NOT ALL COINS CAN BE RESTORED.

Please review the following information and carefully consider whether your coin is a candidate for Restoration before submitting. **If you submit your coin for Restoration you will be charged an examination fee even if your coin is not restored.**

PCGS does not wish to charge for Restoration submissions that are unnecessarily sent in, but if we do the work we have to charge you.

TYPES OF RESTORATION ISSUES

TONING: Removing unattractive toning is the most common use of Restoration. Toned coins may or may not be candidates for Restoration. Coins that suffer from abnormal and unsightly toning caused by the presence of some foreign or caustic substance may be restorable. Coins that have been artificially toned may be restorable, but often the artificial toning covers another problem such as cleaning or altered surfaces. Note that if a coin is attractively toned, we will not restore it just because you want a "white" coin. It's not appropriate for us to make all coins white and destroy natural, attractive toning.

SPOTTING: The other most common type of successful Restoration is removing spots. Spots can usually be removed from silver, nickel, and clad coins. The one exception is modern .999 silver coins from the various world mints. The U.S. Mint has even publicly acknowledged this problem and attributed it to the manufacturing process of the silver planchets. Spots on gold coins are difficult to remove and spots on copper coins can almost never be removed without damaging the coin.

HAZE: Restoration to remove haze from the surface of a coin is often quite successful. The only caveat is that sometimes the haze is covering scratches, marks or other problems, and removing the haze may have a negative impact on the appearance of a coin.

WEAR: There is no Restoration process which can reverse wear. If a coin's surfaces show wear due to normal circulation, or for any other reason, the wear cannot be reversed. Wear permanently alters the condition of your coin. Do not submit your coin for Restoration with the hope that wear can be reversed or improved in any way. Your coin will be returned as is and you will be charged an examination fee. We cannot make a "Good" coin "Very Good." We cannot make an "About Uncirculated" coin "Mint State."

CLEANING: There is no Restoration process for a coin that has been cleaned. When a coin is cleaned the surface luster and original patina are removed. Often the surfaces exhibit hairlines as a result of contact with a cloth, a brush, or another item used to clean the surfaces. Hairlines cannot be removed. Surface luster and original patina cannot be restored. Do not submit a cleaned coin for Restoration. The coin will be reviewed and returned to you unchanged. You will be charged an examination fee.

DAMAGE: Coins that have been damaged will not be repaired by PCGS. This includes coins that have been scratched, scrapped, whizzed, tooled, holed, plugged, exhibit rim damage, or have been altered in any way.

PCGS does not add or remove metal or in any way move metal during the Restoration

Process. Damaged coins cannot be restored using the non-invasive processes that are used during the PCGS Restoration process. Damaged coins that are submitted for Restoration will be returned as is and you will be charged an examination fee.

CONCEALED PROBLEMS: Many coins actually suffer from multiple problems. For example, there may be unsightly spotting or toning, but underneath the toning there is substantial surface damage. Restoration may be able to remove the toning but cannot address the surface damage. If such a coin is submitted for Restoration, at best, it will be returned in a "Genuine" holder.

METALS

Restoration processes and success depend a great deal on the metal content of the coin. Here are some guidelines based on the metal content of your coins:

SILVER: Restoration of silver coins can often be quite successful.

GOLD: Gold coins can usually be restored if the problem is haze or discoloration. Spots on gold coins usually cannot be removed.

NICKEL: Nickel coins can often be restored if the problem is unattractive toning, haze, or spotting; however, success rates for Restoration of nickel coins is less than that of silver coins.

COPPER: This is one area where Restoration seldom works. PCGS will never use any harsh techniques which effectively strip the surface of the coin, nor will we use any techniques which could change the color and surfaces of the coin. Because of this we will not attempt to restore many darkened or toned copper coins.

CLAD: The post-1964 clad coins can often be successfully restored depending on the problem. Success rates are similar to those of nickel coins.

Restoration Candidates

The coins that have the best results from the PCGS Restoration service are:

Silver coins with unattractive toning. It is usually fairly easy (at least for professional experts) to remove unattractive toning from silver coins, and it has been a market-accepted practice for decades. Removing toning usually does not affect a coin's surface and is many times undetectable to even expert eyes.

Gold, silver, nickel, and clad coins with haze. Many coins develop a hazy look over time, and occasionally coin doctors will artificially haze a coin to deceptively enhance its appearance. It is usually very easy to remove haze from coins.

Brilliant proof gold coins. The appearance of brilliant proof gold coins that have haze or discoloration can often be improved with Restoration techniques.

Spotted nickel, silver, and clad coins. Spots can usually be removed from nickel, silver, and clad coins, provided the spots have not eaten into the surfaces of the coin. Spots usually cannot be removed from gold and copper coins.

Restoration Tips

Restoration works in many cases and can produce wonderful results on many coins. Often the result is simply a much more attractive coin.

There is no guarantee that Restoration will increase the value or even result in a higher grade for your coin. Here are a few tips for you to think about before you submit coins to PCGS Restoration:

Make sure the coin's value merits the Restoration fee. If you submit inexpensive coins for Restoration, the Restoration fee may be more than the value of the coin. PCGS Restoration cannot make your \$20 coin a \$500 coin. Our advice is that unless you don't care about the fee and just want to have your coin restored, no matter the cost, you should not send in coins for Restoration unless they are worth at least \$100.

Do not expect miracles. PCGS Restoration can enhance the value of many coins, but it cannot make a worn coin new, a cleaned coin not cleaned, or a MS62 into a MS67. We've even had people send us counterfeit coins for Restoration, we can't make a counterfeit coin genuine!

Realize Restoration doesn't always work. Sometimes the outcome will be very positive, sometimes the Restoration results are neutral, sometimes the outcome will result in a more negative appearance for your coin. And sometimes we cannot do a Restoration, but we do have to charge an examination fee. Why do we have to charge an examination fee even if we don't do any Restoration work? We charge a fee because if we didn't, people could just send in all their coins for a "free" examination, even coins that in no way should ever be submitted for Restoration.

Read the above information carefully and only submit coins to PCGS Restoration that fit the criteria listed above.
